ABOUT MYSELF

Software developer with 3 years of experience building intuitive and user-friendly web applications, ranging from small business websites to complex, scalable systems. Strong focus on balancing technical excellence with user experience, ensuring clean, maintainable and well-structured code. Experienced in developing reliable, high-quality solutions and continuously exploring new technologies to improve development practices and deliver impactful products.

EDUCATION & TRAINING

Bachelor of Science in Computer Engineering

Halic University (English) [01/09/2020 - 01/07/2025]

City: Istanbul | **Country:** Turkey

Level in EQF: 6

focused on software development, algorithms, and human-computer interaction. Gained strong experience in object-oriented programming, web technologies, and software engineering principles through academic projects and internships.

WORK EXPERIENCE

AOGEN - Australia, Sydney

Software developer

[13/07/2025 - Current]

- Designed and developed a multi-tenant SaaS platform using .NET with Clean Architecture and MediatR patterns.
- Built subscription and usage-based billing systems integrated with Stripe (Checkout, Subscriptions, Invoices, Webhooks).
- Implemented a credit consumption engine with plan credits, overage credits and idempotent processing using PostgreSQL.
- Developed background job pipelines with Hangfire and Outbox pattern for reliable event and webhook handling.
- Integrated OAuth authentication with Google, Facebook and TikTok for secure user onboarding.
- Wrote unit tests to validate core business logic and prevent regressions.
- Implemented access gating mechanisms to restrict user actions based on subscription status, plan limits and credit availability.
- Built e-commerce modules and CMS features for dynamic product, category and content management.
- Developed admin panels and dynamic content sections for managing banners, homepage blocks and product listings.
- Implemented real-time notifications using SignalR and optimized performance with Redis caching.
- Designed and optimized PostgreSQL schemas and queries to improve performance and scalability.
- Worked on responsive UI components using HTML, CSS, Bootstrap and jQuery.
- Wrote clean, maintainable and well-documented code with strong attention to performance and scalability.

EKON Yazılım & Teknoloji - Turkey, Istanbul

Software developer

[01/03/2025 - 09/07/2025]

- Writing modular, testable code with attention to performance and reusability.
- Building a dynamic CMS admin panel using C# (.NET) for backend logic and HTML/CSS/JavaScript for the frontend.
- Developed RESTful API endpoints in .NET to manage dynamic content and user interactions within the CMS.
- Write clean and well-documented code, following best practices.
- Developed background services to process scheduled tasks and synchronize external data sources with internal databases via API integration.

QAPERA - Turkey, Istanbul

Software developer

[01/07/2024 - 01/09/2024]

- Developed front-end components and features using Angular within a customer relationship management (CRM) system.
- Consumed and processed RESTful APIs to display dynamic data on the client side.
- Implemented reusable UI elements and improved data presentation and responsiveness.
- Collaborated with the development team in an agile environment and participated in code reviews and sprint planning meetings.

- Integrated third-party libraries (e.g., PrimeNG) to accelerate UI development and ensure design consistency.
- Debugged and resolved UI/UX bugs to improve overall user experience and interface stability.

Webbilar - Turkey, Istanbul

Software developer

[01/06/2022 - 01/01/2024]

- Worked as a full-stack developer in E-Commerces and landing page projects. Developed dynamic and responsive web applications with .Net multi layered architecture.
- Strong knowledge of using OOP, Loosely coupled systems and Design Patterns (Unit Of Work, Dependency Injection, Disposable pattern, Constructor overloading)
- Integrated payment systems (Authorize.net, lyzico, Paytr, Garanti) for subscriptionbased services.
- Used database first approach with Entity Framework and MS-SQL server.
- Consumed APIs (Infobip, SAP) for messaging and invoice data transfers.
- Created and maintained SQL stored procedures, views for complex business logic.
- Optimized application performance by profiling queries and refactoring inefficient code blocks.
- Participated in requirement analysis and client meetings to ensure alignment between business needs and technical implementation.

SKILLS

Languages

C# | JavaScript | TypeScript | SQL

Backend

ASP.NET | PostgreSQL | Redis | SignalR

Frontend

React | Angular | HTML | CSS | JQuery | Bootstrap

DevOps & Tools

Docker | Git | CI / CD | RabbitMQ | Azure
